## Introduction to Directory Services

TOTAL POINTS 3

1. What does a directory server provide?

1 / 1 point

- ☐ A real-time communication service
- ☐ A network time service
- ☒ A lookup service for an organization
- ☐ A replication service

Correct

That's exactly right! A directory service allows members of an organization to lookup information about the organization, like network resources and their addresses.

2. What benefits does replication provide? Check all that apply.

1 / 1 point

- ☒ Redundancy

Correct

Great job! Directory server replication grants you redundancy by having multiple copies of the database being served by multiple servers. The added servers that provide lookup services also reduce the latency for clients querying the service.

- ☐ Enhanced security
- ☐ Increased capacity
- ☒ Decreased latency

Correct

Great job! Directory server replication grants you redundancy by having multiple copies of the database being served by multiple servers. The added servers that provide lookup services also reduce the latency for clients querying the service.

3. What's the most popular directory services protocol used today?

1 / 1 point

- ☐ Directory Access Protocol
- ☐ Directory System Protocol
- ☒ Lightweight Directory Access Protocol
- ☐ Directory Operational Binding Management Protocol

Correct

Yep! LDAP is the most popular and widely used directory access protocol today.
