GRADE

100%

Application Hardening

TOTAL POINTS 2

1. Why is it important to keep software up-to-date?

1 / 1 point

- ☐ To ensure compatibility with other systems
- ☐ It's not important. It's just annoying.
- ☒ To address any security vulnerabilities discovered
- ☐ To ensure access to the latest features

Correct

Nice work! As vulnerabilities are discovered and fixed by the software vendor, applying these updates is super important to protect yourself against attackers.

2. What are some types of software that you'd want to have an explicit application policy for? Check all that apply.

1 / 1 point

- ☐ Word processors
- ☐ Software development kits
- ☒ Filesharing software

Correct

Great job! Video games and filesharing software typically don't have a use in business (though it does depend on the nature of the business). So, it might make sense to have explicit policies dictating whether or not this type of software is permitted on systems.

Correct
