Managing Processes

TOTAL POINTS 2

1. Which of the following tools can help you gather information about the processes running on a Windows operating system?

1 / 1 point

- ☐ The Task Manager
- ☐ The tasklist utility from a command prompt
- ☐ The Get-Process commandlet from a PowerShell prompt
- ☒ All of the above

Correct

Nice job! All of these tools can help you gather information about processes running on a Windows OS.

2. If you restart a process using the Process Explorer utility, what will the new parent of that process be?

1 / 1 point

- ☐ cmd.exe
- ☒ Process Explorer
- ☐ windows.exe
- ☐ momanddad.exe

Correct

You nailed it! Since Process Explorer is the process that initiated the restart, it makes sense that the new parent of the process will be Process Explorer.
